John Haupt, MDT, FAACD

"Pro Arch Solution: Introduction to Fixed Full-Arch Implant Restorations"

The process of treating edentulism with full-arch implant supported restorations remains to be a priority for dental clinicians as well as the patients who need and would benefit from this treatment. Surgical treatment of complete and single arch edentulous cases require a team approach and the treatment will vary based on determining factors, such as patient anatomy, available bone, and patient treatment desires. This lecture will review the clinical documentation of this concept as well as techniques for other available options. Proper case selection, diagnostic necessities for evaluation of cases, as well as the impact of incorporating fully edentulous treatment options into a practice will also be discussed.

Dr. Paul Patrungaro

"Expanding Implant Treatment Options with the use of Narrow Diameter Implants"

Evidence and clinical based lecture highlighting how narrow-diameter implants complement the current implant armamentarium. Narrow diameter-implants, available from 1.8 to 2.8mm diameter, offer a fixed permanent tooth replacement option for patients that otherwise would not be able to have implants placed and restored. Their ease of use and atraumatic placement makes their use a must for the dental implant practice. Developed more than 20 years ago and, initially recommended to support temporary removable prostheses during the healing phase for advanced bone-grafting procedures and/or conventional implant placement. Their use has since expanded into immediate conversion of full dentures to implant-supported dentures, support for partially edentulous cases and for anchorage of single tooth implant restorations in compromised inter-tooth spaces.

"Getting Financially Organized - An Integrated Approach to Managing Your Practice and Personal Finances"

Dentists enjoy a profitable industry. Yet according to the ADA only 3% of dentists are able to retire at age 65 and maintain their lifestyle. Why? It's because they never establish a proactive system of managing their finances, both in and out of the practice. This course will present an overview of a system that works. We'll look at the cornerstones to that system, including goal setting, effective dental-specific financial reporting, tax strategies, expense management, and if time permits 401k plan design.
